

# Buddy

## Robotic Lawn Mower

### QUICK GUIDE

1. For the best result have your grass cut in the days leading up to Buddy's first job.
2. Fully charge the battery before first use .
3. Remove any sticks, stones or other items that could damage the blades.
4. Ensure there are no open areas leading to large fields around your gardens perimeter.
5. Press the power button, wait for the lights to stop flashing.
6. Press GO.
7. Sit back and enjoy your chocolates.

- ⚠ The length and density of your grass will determine how long the battery will last, once Buddy has gotten down to his liking your battery should last 50-60 minutes. **We recommend length 35mm**, any lower and the sun will start to burn the roots.
- ⚠ For the best results regularly brush around the blades to remove clogged up grass.
- ⚠ If you have a garden with lots of buttercups or similar weeds Buddy will work best in the evening when the sun is not as bright.
